

Recirculation Systems
Hydroponics
Deep Water Culture

Follow the Feed Chart for High Strength. Always water with nutrients.
Replace the reservoir solution every 7 to 10 days.
Top off water as needed with premixed SimPro solution.
Excessive aeration may cause oxidation of micronutrients, particularly iron.
If necessary, supplement with SimPro Cal-Mag which contains iron.
SimPro is alive, microbes thrive in solution causing particulates to form.
The organics in SimPro will stain the roots brown, this is normal.

Runoff Systems
Coco Coir / Peat
Rockwool

Follow the Feed Chart for High Strength. Always water with nutrients.
Water until runoff is achieved, at least 10% should drain preventing buildup.
Use coco coir that has been properly washed and buffered with Cal-Mag.
Obtain perfect water to air ratio by using a mix of 70% Coco to 30% perlite.
This mix cannot be overwatered in a single session, excess water will drain off.
If watered too often then this can be considered over watering.
Allow the top 1/2 - 1 inch of media to dry between waterings.

Soil Mixtures
General Purpose
Living Soil

Follow the Feed Chart for Low Strength. Fertilize once a week.
Soil quality and nutrient content varies greatly.
Do Not over fertilize nutrient rich soil.
The organics and nutrients in SimPro will benefit your soil and plants.
Over time nutrients in soil will diminish; Increase SimPro strength if needed.
Do Not over water.
Allow the top 1/2 - 1 inch of soil to dry between waterings.
To prevent nutrient buildup, periodically water with runoff.

Foliar Feeding
Compatible with
Organic and Biological
Pesticides

Foliar Feed at Low Strength. Spray once a week.
Do not Foliar spray while in flower.
Spray during low light conditions, preferably 30-60 min before intense light.
Foliar feeding is optional and offers the following benefits.
Inoculation with SimPro Microbes may prevent pathogens such as mildew.
Provides additional nutrition directly to the plants.
Rapidly corrects nutrient deficiencies.
Use Bloom Formula foliar feeds on young clones and seedlings.

Simply Professional FORMULA

Feed Chart

Simply Professional Formula saves you time and money by eliminating effort and guesswork associated with mixing multiple nutrients and additives. SimPro Formulas are fortified with Microbes, Molasses, Yucca, Humates, Amino Acids, Silica, Seaweed and Aloe Vera. Everything your plants require and desire for root, stem, foliage and bloom performance.

Enjoy #SimplyProfessionalResults

Our Formulas are stand-alone fertilizers.
One scoop is all you need.
We offer:

- 2-Stage Program of Vegetation & Bloom
- or
- 4-Stage Program of Vegetation, Transition, Bloom & Boost

While you could run Vegetation from start to finish, we fine tune the formulas to give your plants optimum nutrition at each stage of growth and development. Refer to our feed chart for details.

Simply Professional's All-In-One Formulas, (Vegetation, Transition, Bloom & Boost) contain concentrated beneficial bacteria and fungi that produce enzymes which decompose organic material into plant available nutrients, biostimulants and natural plant growth hormones while also protecting the rhizosphere from pathogens and parasites.
